

Built for the questions med spas are actually asking.

MDM is a single supply relationship for peptides, exosomes, transdermal delivery, and advanced skincare — sourced from licensed pharmacies, FDA-registered facilities, and AATB-accredited tissue banks. This brief is a starting point for a conversation.

SOURCING YOU CAN STAND BEHIND

Where every product line comes from.

Licensed compounding

503A compounding pharmacy partnerships · state-licensed across the U.S. · COA documentation available on request.

FDA-registered facilities

Lyophilized peptide manufacturing and exosome processing in FDA-registered, ISO Class 6 cleanroom facilities.

AATB-accredited recovery

Birth-tissue products recovered by AATB-accredited technicians with independent third-party donor screening.

CONVERSATIONS WE HAVE WITH MED SPA TEAMS

Start anywhere — we'll walk through what fits your practice.

TOPIC 01

Peptide programs

Ask us about the difference between 503A compounded injectables and physician-exclusive lyophilized vials — and which therapeutic categories each pharmacy partner covers.

TOPIC 02

Exosomes & skincare

Ask us about the Wharton's Jelly tissue bank we distribute for, the donor-screening protocol, and the exosome + GHK-Cu topical designed for med spa retail.

TOPIC 03

Transdermal delivery

Ask us about the clinician-directed iontophoresis patch system — a needle-free way to deliver peptides, NAD, and cofactors that pairs with your existing in-clinic protocols.

WHAT'S IN THE PORTFOLIO

Four categories under one supply relationship.

Peptide therapies

Compounded injectables & lyophilized vials

- Metabolic, recovery, anti-aging & HRT-adjacent formularies
- 503A compounding pharmacy partnerships
- Physician-exclusive lyophilized peptide network

Transdermal delivery

Clinician-directed iontophoresis patch

- Needle-free, multi-hour active wear
- Designed to pair with in-clinic protocols
- Patch + cofactor inventory program

Exosomes & biologics

Wharton's Jelly regenerative line

- Sourced from an FDA-registered tissue bank
- AATB-accredited recovery, ISO Class 6 processing
- Independent third-party donor screening

Aesthetic skincare

Exosome + GHK-Cu topical for clinical retail

- Made in an FDA-registered USA facility
- Room-temperature stable formulation
- Distributor & clinic-direct programs available

HOW WE WORK WITH CLINICS

A straightforward supply relationship.

Tailored to your clinic

We build the mix around your patient base, service menu, and staff bandwidth — not a one-size template.

Documentation on request

COAs, donor screening summaries, and facility credentials available for your medical director's review.

A real relationship

Direct access to your local MDM rep — not a call center, not a quoting portal.

LET'S TALK · WE'LL WALK YOUR TEAM THROUGH ANY OF THE TOPICS ABOVE.

Contact your local MDM representative.

Every MDM rep is trained across the full portfolio and can walk your team through peptides, exosomes, transdermal delivery, and skincare — then tailor a mix that fits your clinic. Reach out to the representative who gave you this brief, or connect with us online.
