ADVANCED SKIN SCIENCE

SEE THE DIFFERENCE. FEEL IT FIRST.

WITH GHK-CU PEPTIDE COMPLEX

Your skin knows when something is working. Most creams sit on the surface and wait. Nyoteni™ goes deeper – and your reflection will show it

Formulated with trillions of exosomes · GHK-Cu at 99.7% purity, 1% concentration · Advanced transdermal delivery

WHY NYOTENI™ IS DIFFERENT

YOUR SKIN HAS BEEN WAITING FOR A REAL SIGNAL TO RENEW.

Most skincare products promise transformation but deliver hydration. They feel nice, they sit on the surface, and they do very little for what your skin actually needs: a biological trigger to repair, rebuild, and regenerate from within.

Nyoteni™ Exosome Cream was formulated around a different question entirely – not "how do we make skin feel softer?" but "how do we speak to skin cells in a language they already understand?" The answer is two of the most scientifically validated actives in modern aesthetic medicine, delivered together at a depth and potency that makes the difference you can see in your mirror.

REAL SKIN CHANGE, ON A REAL TIMELINE.

WEEK 01 DAYS 1–7

Skin feels immediately more hydrated and supple. Surface texture begins to refine. The overnight formula goes to work during your skin's own repair window.

WEEK 03 - 04 DAYS 15–28

Visible improvement in skin radiance, texture, and elasticity. Fine lines appear softer. Friends notice before you tell them anything has changed.

WEEK 02 DAYS 8–14

Visible improvement in skin radiance, texture, and elasticity. Fine lines appear softer. Friends notice before you tell them anything has changed.

MONTH 2+ ONGOING

Cumulative regenerative signaling builds beneath the surface. Skin looks and behaves younger – resilient, firm, luminous – with continued use.

TWO BREAKTHROUGHS. ONE EXTRAORDINARY CREAM.

GHK-CU PEPTIDE

A naturally occurring copper peptide that acts as a master switch for skin renewal – activating collagen and elastin synthesis, reducing inflammation, and modulating over 4,000 genes linked to repair and regeneration. Nyoteni™ uses it at 99.7% pharmaceutical purity and a full 1% concentration. That distinction matters enormously.

**MOST PRODUCTS USE TRACE AMOUNTS.
WE USE THE REAL DOSE.**

STEM CELL EXOSOMES

Exosomes are nanoscale biological messengers – nature's own delivery system for repair instructions between cells. Loaded with growth factors, anti-inflammatory proteins, and microRNA, they don't just moisturize skin. They tell it how to heal. Nyoteni™ delivers trillions per application, sourced from mesenchymal stem cells for maximum regenerative signal.

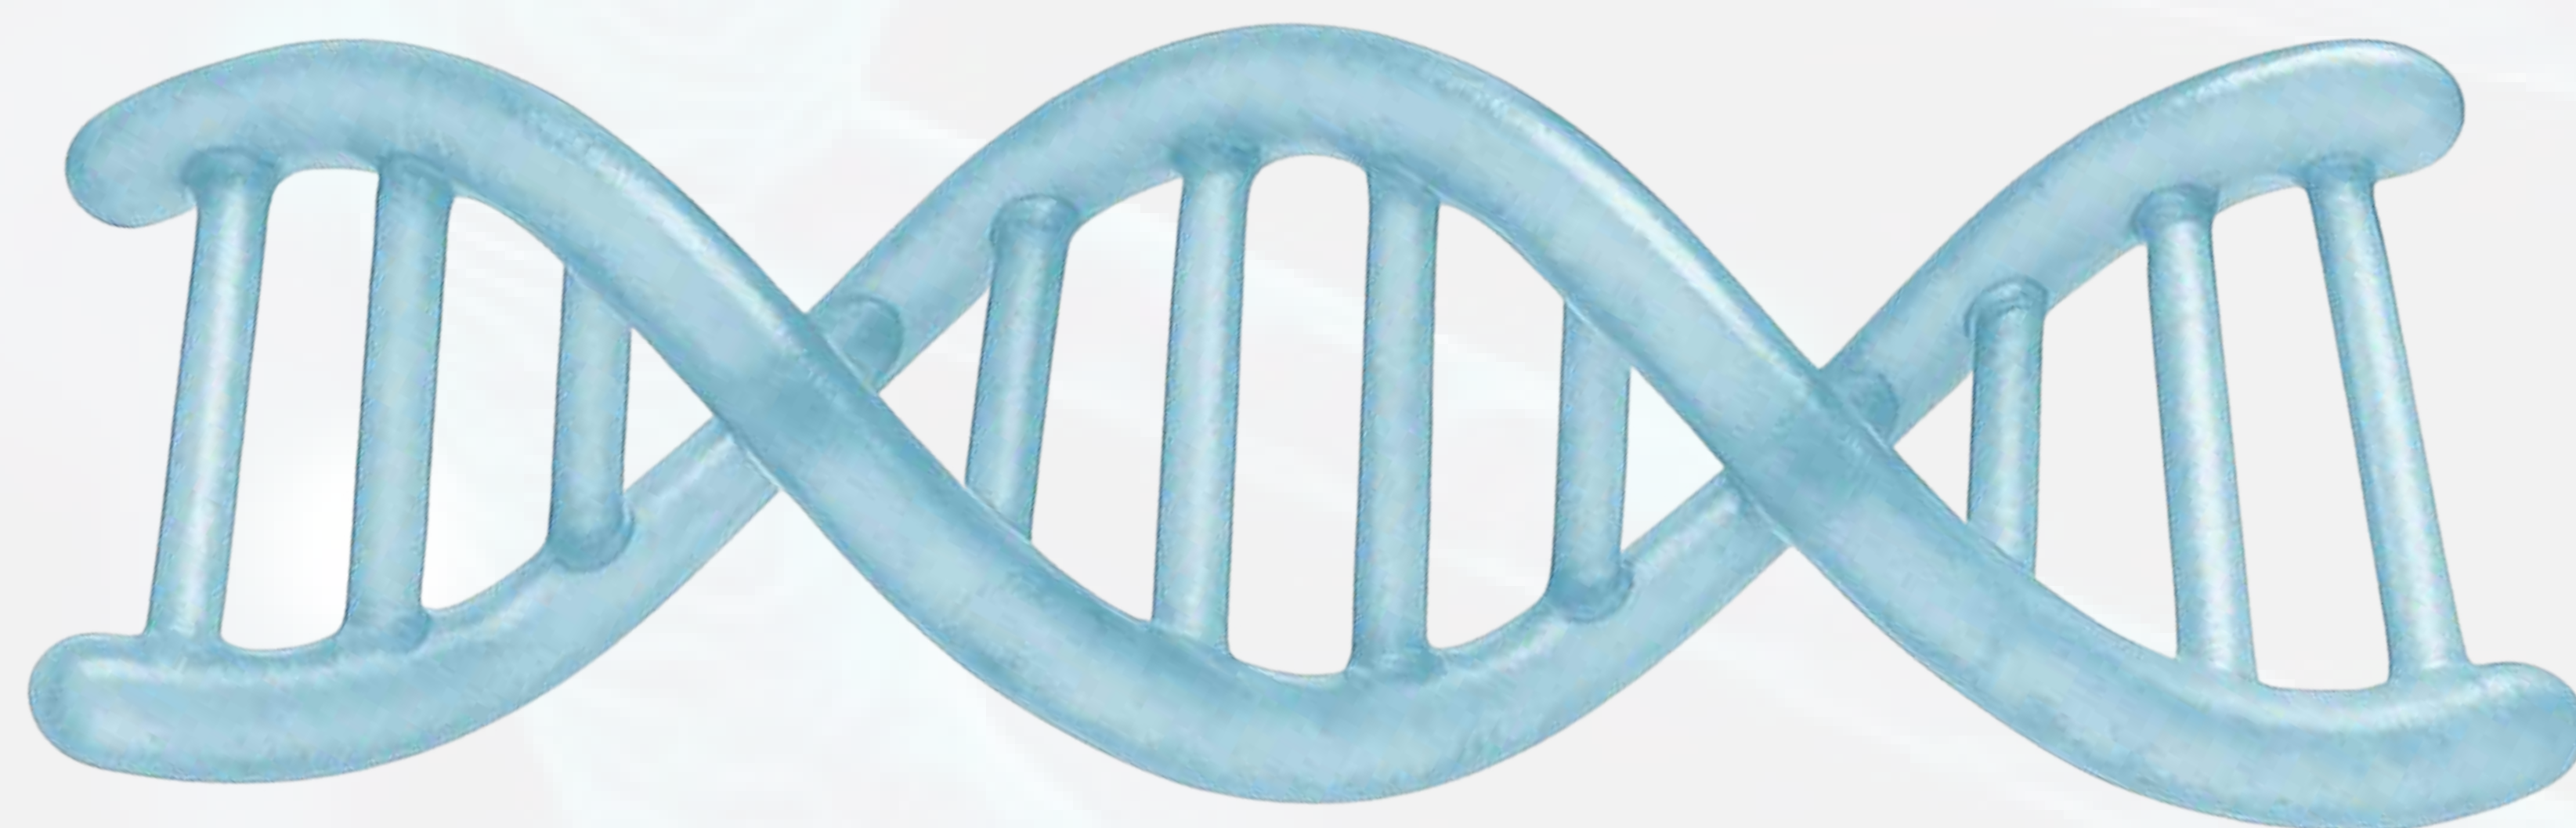

**NOT A TREND. A FUNDAMENTAL SHIFT IN
WHAT TOPICAL SKIN SCIENCE CAN DO.**

THE NYOTENI™ ADVANTAGE

TOGETHER, THEY DO SOMETHING NEITHER CAN DO ALONE.

GHK-Cu works at the level of your DNA — **priming your skin's genes for repair.** Exosomes work at the level of your cells — **delivering the biological instructions that activate it.** Genetic readiness meeting cellular signal. Two mechanisms, one formula, one moment of application.

Then Nyoteni™'s transdermal delivery system ensures both actives actually reach the dermal layers where this work happens — not just the surface. Because a breakthrough formula is only as good as its ability to get where it needs to go.

The result is a regenerative cascade that no single-active product — no matter how concentrated — can produce. This is not incremental improvement. It is a new category of skin science, available to you in one nightly ritual.

"GHK-Cu primes the skin's cellular environment for renewal. Exosomes deliver the signal that ignites it. Nyoteni™ is the first formula to unite both — at the concentration and depth that make the science real."

YOUR SKIN, TRANSFORMED

THE BEST TIME TO START IS TONIGHT.

Skin renewal happens while you sleep. Apply Nyoteni™ before bed and let trillions of exosomes and pharmaceutical-grade GHK-Cu get to work during the hours your skin is already primed for change. Most clients notice a difference within the first week.
