

Exosome Products

Cytocell and Cytocell Pro

MSC and Plasma-derived Exosomes

Vitacell carries both MSC-derived (Cytocell Pro) and plasma-derived (Cytocell) exosomes. Exosomes are tiny vesicles derived from cells that play a vital role in intercellular communication. Packed with regenerative potential, our exosome products deliver a powerful message to the patient's body, stimulating healing and regeneration.

Testing and Processing

Our exosome product is meticulously processed using aseptic technique to ensure the highest quality and potency. Exosomes are extracted from the source tissue using our patented processing methods and vialled in a dry, powdery form which is stable at room temperature for two years.

Each batch undergoes rigorous quality control measures, ensuring safety, efficacy, and consistency. With Cytocell products, you can confidently provide your patients with a reliable and proven option for their regenerative needs.

Identifying Patients for Exosomes

The versatility of exosomes opens up a world of possibilities for a wide range of patients. Whether you focus on aesthetics, orthopedics, or wound care, our exosome product can be tailored to meet your patients' specific needs. By enhancing cellular communication and aiding the body's own regenerative responses, it promotes tissue repair, reduces inflammation, and supports the natural healing processes. Ask us for before/after images to see real patient outcomes that you can bring to your clinic.

Components:

- Cytokines
- Lipids
- Proteins
- Growth Factors
- mRNA

"After burning 85% of my body during a freak fire accident, I was not expected to live. Thanks to the immediate response of my physician and the team at Vitacell Bio Global, I not only survived, but am now able to live a grateful, thriving life... There are no words to express the gratitude for giving me back my life."

- James Boyle, Patient
